Introduction	xi
PART I – CREDIT RISK MANAGEMENT	
1 – Overview of Credit Risk	3
1.1 Components of Credit Risk	4
1.2 Factors Determining the Credit Risk of a Portfolio	5
1.3 Traditional Approaches to Managing Credit Risk	8
1.4 Market Risk versus Credit Risk	10
1.5 Historical Data	12
1.6 An Example of Default Loss Distribution	15
1.7 Credit Risk Models	21
1.8 Conclusion	29
2 – Exposure Measurement	31
2.1 Introduction	31
2.2 Exposure Simulation	33
2.3 Typical Exposures	36
2.4 Conclusion	44
3 – A Framework for Credit Risk Management	45
3.1 Credit Loss Distribution and Unexpected Loss	45
3.2 Generating the Loss Distribution	48
3.3 Example – One Period Model	62
3.4 Multiple Period Model	66
3.5 Loan Equivalents	69
3.6 Conclusion	71
Appendix A – Derivation of the Formulas for Loan Equivalent Exposures	71
Appendix B – Example Simulation Algorithm	73
4 – Advanced Techniques for Credit Risk Management	75
4.1 Analytical Approximations to the Loss Distribution	75
4.2 Monte Carlo Acceleration Techniques	79
4.3 Extreme Value Theory	85
4.4 Marginal Risk	90
4.5 Portfolio Optimisation	99
4.6 Credit Spread Model	106
4.7 Conclusion	115

PART II – PRICING AND HEDGING OF CREDIT RISK

5 – Credit Derivatives	121
5.1 Introduction	121
5.2 Fundamental Credit Products	122
5.3 Fundamental Ideas on Pricing Credit	126
5.4 Pricing Fundamental Credit Products	127
5.5 Credit Spread Options	146
5.6 Multiple Underlying Products	156
5.7 Conclusion	177
6 – Pricing Counterparty Risk in Interest Rate Derivatives	183
6.1 Introduction	185
6.2 Overview	186
6.3 Expected Loss versus Economic Capital	190
6.4 Portfolio Effect	191
6.5 The Model	192
6.6 Interest Rate Swaps	193
6.7 Cross-Currency Swaps	199
6.8 Caps and Floors	202
6.9 Swaptions	202
6.10 Portfolio Pricing	204
6.11 Extensions of the Model	209
6.12 Hedging	211
6.13 Conclusion	220
Appendix A – Derivation of the Formula for the Expected Loss on an Interest Rate Swap	221
Appendix B – The Formula for the Expected Loss on an Interest Rate Cap or Floor	226
Appendix C – Derivation of the Formula for the Expected Loss on an Interest Rate Swaption (Hull and White Interest Rate Model)	227
Appendix D – Derivation of the Formula for the Expected Loss on a Cancellable Interest Rate Swap	236
Appendix E – Market Parameters used for the Computations	246
7 – Credit Risk in Convertible Bonds	245
7.1 Introduction	245
7.2 Basic Features of Convertibles	246
7.3 General Pricing Conditions	247
7.4 Interest Rate Model	248
7.5 Firm Value Model	249
7.6 Credit Spread Model	260
7.7 Comparison of the two Models	269
7.8 Hedging of Credit Risk	272
7.9 Conclusion	274
Appendix A – Firm Value Model – Analytic Pricing Formulae	274

Appendix B – Derivation of Formulae for Trinomial Tree with Default Branch	275
Appendix C – Effect of Sub-optimal Call Policy	276
Appendix D – Incorporation of “Smile” in the Firm Value Model	278
8 – Market Imperfections	281
8.1 Liquidity Risk	284
8.2 Discrete Hedging	295
8.3 Asymmetric Information	300
8.4 Conclusion	311
Appendix	313
1. <i>Credit Swap Valuation</i> – Darrel Duffie	315
2. <i>Practical use of Credit Risk Models in Loan Portfolio and Counterparty Exposure Management</i> – Robert A. Jarrow and Donald R. van Deventer	338
3. <i>An Empirical Analysis of Corporate Rating Migration, Default and Recovery</i> – Sean C. Keenan, Lea V. Carty and David T. Hamilton	350
4. <i>Modelling Credit Migration</i> – Bill Demchak	376
5. <i>Haircuts for Hedge Funds</i> – Ray Meadows	389
6. <i>Generalising with HJM</i> – Dmitry Pugachevsky	400
Glossary	409
Index	421
