	APPENDIX: COMMON SOURCES OF MAJOR CREDIT PROBLEMS	21

In general, most banks' loans are the largest and most obvious source of credit risk; however, other sources of credit risk exist throughout the activities of a bank, including in the banking book and in the trading book and both on and off the balance sheet. Banks also increasingly take credit risk on counterparty debt to various financial instruments other than loans, including acceptance facilities, letters of credit, swap arrangements, foreign exchange transactions, financial swaps, swaps, bonds, equities, options, and in the extension of commitments and guarantees, and the refiling of transactions.

Given these exposures to credit risk, particularly in the trading book, of problems in bank lending, most banks and their supervisors should be able to draw useful lessons from past experiences. Banks should now have a keen awareness of the need to identify, measure, monitor and control credit risk, as well as to determine that the risk is adequately compensated. These risks and the costs are adequately compensated for risks incurred. The Basel Committee is issuing this document in order to encourage banking supervision globally to promote sound practices for managing credit risk. Although the principles contained in this paper are most clearly applicable to the business of lending, they should be applied to all activities where credit risk is present.

The sound practices set out in this document specifically address the following areas: by establishing an appropriate credit risk environment; by operating under a sound credit granting process; by maintaining an appropriate credit administration, measurement and monitoring process; and by ensuring adequate controls over credit risk. Although specific credit risk management processes may differ among banks depending upon the nature and complexity of their credit activities, a comprehensive credit risk management program will address these four areas. These practices should also be applied in conjunction with sound practices related to the assessment of asset quality, the adequacy of provisions and reserves.
